

SEPTIM

ABOUT US

SEPTIM offers consultancy services within business development, project management and technical engineering for the maritime industry.

The Founder of Septim Consult AS, Kenneth Langvatn, has spent his whole career within different sections of the maritime industry. With his technical background, he's held a variety of positions, such as Project Manager, Sales Manager, and the last decade as Managing Director. He was Project Manager for a dozen newbuild offshore vessel projects, where he possessed the responsibility for administrative and commercial affairs and the technical aspects within electrical installation, engineering and collaboration between all principals within the projects. His experience as Sales Manager and CEO has given him valuable insight and knowledge within business development and international sales, and has developed a broad awareness of the many cultures and game rules world wide. Through close collaboration with ship design offices, shipowners and shipyards he has been deeply involved in the design philosophy of electrical propulsion and distribution, for numerous newbuilding vessel projects in Europe, Far East and in the US.

WHAT WE DO

Building ships or keeping them fit for tomorrow's assignments, requires deep technical expertise within a wide set of disciplines. We wouldn't dare to call ourselves experts in all of them, however, some are within reach of our capabilities. Here is what we can do for you:

Electric power system philosophy

The basic package to get the ideas and plans for your new vessel the necessary step forward to being realized. By thorough collaboration between SEPTIM, ship designer, owners, class and the main system suppliers, we can design the best solutions of power distribution, in terms of dependability, safety, efficiency and space stingy arrangements.

Project management and supervision

Succeeding a newbuilding or conversion project requires a steady hand and a watchful look at details as well as keeping the overview of the whole picture. SEPTIM provides technical and administrative management and on-site supervision throughout the project.
